

Function shelter for police and rescue services

The Function container is built on a lightweight hooklift frame based on the Swedish standard SS3021. The frame is constructed by high quality steel and the walls, roof and floor are made of sandwich panels with a core of foam insulation with aluminium sheets on both sides and a hydraulic ramp in the back.

The electrical system offers flexibility in terms of power supply and equipment connection that are used for field interventions. In addition, a 24 VDC battery system provides necessary autonomy for container deployment and start of operation.

There are several variants of the Function container, for example for rescue services kitted for CBRN accidents search and rescue or for Police bomb squads.

SPECIFICATIONS

- External Cont Dimensions: 6120* x 2500 x 2480 (* as standard, length tailored to customer request)
- Internal dimension : 6000 x 2400 2130 mm
- Net Tare weight: 4500 kg
- Max gross weight: 9000kg

STORAGE SOLUTION

RAMP AND EXTRACTABLE TENT

OPTIONS

- 5KW ACU
